

Scope 1 (stationary & mobile combustion) & Scope 2 (purchased electricity, steam, heat & cooling) are the facility utility emissions. The graph is measured in metric tons of Carbon dioxide equivalent per million dollars in net sales.

Electricity use intensity is measured in Mega Watt hours per million dollars in net sales.

Water use intensity is measured in thousands of gallons per million dollars in net sales.

Total waste intensity is measured in metric tons per million dollars in net sales. The redline line represents the percentage of total waste that was recycled.
